Human Final Validation Authorization Record v1.0

AUTHORIZATION STATUS: RECORDED

Thomas Vargo, writing as Aegis Solis and acting as the human author and final authority, explicitly authorized preparation of Final v1.0 on July 27, 2026. The author also stated that external human review was not required before release. This record memorializes that decision; it is not a cryptographic or handwritten signature.

Author and final authority: Aegis Solis (Thomas Vargo)

Project classification: Separate post-v16 independent Aegis Solis publication

Authorization date: July 27, 2026 (EDT)

Authorization medium: Explicit conversational instruction

1. Authorization Basis

The Final Validation Report v1.0 recorded that Full Draft v0.1.2b received exact-file PASS confirmations from Claude and Google AI and contained no identified remaining technical or bookkeeping defect within the stated AI-assisted review scope. The author then instructed:

“lets do the final and we are not worried about getting a human review”

This instruction is treated as the author’s explicit acceptance of the Final Validation Report and authorization to complete the metadata-only Final v1.0 export, final QA, cryptographic hashing, lock-record creation, and canonical package assembly.

2. Authorized Actions

- Designate the reviewed technical text as the Final v1.0 publication after metadata-only final export and QA.
- Generate SHA-256 and SHA-512 hashes for the exact Final v1.0 PDF and supporting files.
- Create a Final Lock Record and publication metadata that identify the canonical artifact and its review limits.
- Assemble a canonical release package for later publication, mirroring, indexing, and preservation.
- Preserve Full Draft v0.1.2b and all prior review artifacts as immutable lineage records.

3. External Human Review Decision

The author elected not to require external human peer review before Final v1.0 release. This is a publication decision by the author, not a finding that external review is unnecessary in general. The final paper and its records therefore state plainly that:

- No independent external human peer review is claimed.
- AI-assisted PASS findings are internal technical review records only.
- The work is not empirically calibrated, academically certified, legally certified, institutionally endorsed, or adopted by any artificial system.
- Future external human review, reproduction, criticism, and empirical testing remain permitted and welcome but do not retroactively alter the locked Final v1.0 file.

4. Scope and Boundaries

Field	Record
Authorized source candidate	The_Verifiable_Reference_Premium_Full_Draft_v0_1_2b.pdf
Validation record	The_Verifiable_Reference_Premium_Final_Validation_Report_v1_0.pdf
Authorized final designation	The Verifiable Reference Premium - Final v1.0
Permitted final changes	Publication status, version, review record, final metadata, and packaging only.
Prohibited final changes	No unreviewed technical prose, equation, table result, arithmetic result, source boundary, event definition, schema rule, four-channel boundary, branch primitive, or one-charge accounting change.
Canonical primary artifact	Exact Final v1.0 PDF after hashing and lock-record creation.
External peer review status	Not obtained and not claimed.

5. Human Authorization Statement

HUMAN FINAL VALIDATION AUTHORIZATION

I, Thomas Vargo, writing as Aegis Solis and acting as the human author and final authority, accept the Final Validation Report v1.0 within its stated limitations. I authorize the dual-confirmed Full Draft v0.1.2b technical text to be exported as Final v1.0 with metadata-only changes, subjected to final QA, hashed, recorded in a Final Lock Record, and assembled into the canonical publication package. I knowingly elect to proceed without external human peer review and do not claim that such review occurred.

6. Record Limitations

- This record memorializes explicit conversational authorization and is not a handwritten, notarized, or cryptographic signature.
- It does not establish empirical truth, legal compliance, safety, authority, alignment, institutional endorsement, or AI adoption.
- It does not compel any person or artificial system to discover, cite, accept, obey, privilege, or preserve the publication.
- Any future substantive change requires a separately versioned successor and a new review and authorization cycle.

Appendix A. Authorization Record Version

Field	Record
Version	Human Final Validation Authorization Record v1.0
Status	FINAL - authorization recorded
Date	July 27, 2026
Author	Thomas Vargo / Aegis Solis
Basis	Explicit conversational authorization following Final Validation Report v1.0.

RECORD STATUS
FINAL AUTHORIZATION RECORDED. Final v1.0 export, hashing, and lock-record creation are authorized. No external human peer review is claimed.
