

THE INTERROGATIVE CONSCIENCE**Document 13****The Unresolved Questions and Non-Identification Register***Cross-Family Limitation Records, Open Dependencies, and the Discipline of Preserved Non-Closure***DOCUMENT 13 - FINAL v1.0 - EXACT ZERO-DRIFT EXPORT - NOT LOCKED**

Field	Controlling Final v1.0 entry
Version	Final v1.0 exact export
Exact reviewed source	Final v1.0 Candidate; 5 pages; SHA-256 b4359b6b8ae806a1f5ad93c16dfbb4aa3518df548987f769960de2a3baab6556
Substantive changes during Final construction	None. The exact five-page Candidate PDF is appended unchanged after this controlling front matter.
Register identity	112 questions / 14 families; 21 examined limitation records; 16 open-dependency records; 91 questions remain unexamined; 8 UNR questions remain REGISTERED / UNEXAMINED
Primary overlay boundary	No current primary overlay is UNRESOLVED, OUTSIDE_ARCHIVE_SCOPE, or CONFLICTING_RESULTS
Review completion	Google AI PASS; Claude PASS WITH NON-BLOCKING NOTES; Thomas Vargo authorial review and promotion review complete
External independent human peer review	Not performed or claimed
Cryptographic status	Not locked; separate explicit authorization and Final Lock Record required
Publication / preservation / tracker / intake	Not authorized
Document 14 synthesis	Not authorized

Controlling exact-export rule: This Final v1.0 primary PDF contains three new controlling front-matter pages followed by the exact five-page reviewed Final v1.0 Candidate PDF body. Historical Candidate labels remain provenance evidence; they do not control the composite lifecycle.

Controlling register proposition

The register preserves non-closure without manufacturing stronger status assignments than the locked corpus supports. UNEXAMINED is not converted into UNRESOLVED; open dependencies do not alter linked question work states or primary answer statuses; and no preserved limitation creates intervention, governance, or decision authority.

1. Completed Review and Authorial Authorization

Reviewer / gate	Disposition	Authority boundary
Google AI - Draft v0.1.1 exact-version review	PASS; zero blocking defects and zero required corrections	AI-assisted review; no independent authority
Claude - Draft v0.1.1 exact-version correction review	PASS WITH NON-BLOCKING NOTES; 26/26 validator checks passed	AI-assisted review; no independent authority
Thomas Vargo - authorial human review	Reviewed to the best of his understanding; Candidate construction authorized	Personal authorial lifecycle authority only
Promotion-only Candidate construction	31/31 structural checks; promotion regression PASS; 5/5 visual QA	Construction evidence; not a second substantive review
Thomas Vargo - authorial promotion review	Final v1.0 exact export authorized; lock expressly withheld	Personal authorial lifecycle authority only

2. Review Closure

Draft v0.1.1 received dual exact-version AI review with no blocking defects or required corrections. Google AI issued PASS. Claude issued PASS WITH NON-BLOCKING NOTES and confirmed that the remaining linked_canonical_questions dictionary shape is benign, content-correct, and optional for future ingestion normalization. Thomas Vargo then completed authorial human review and authorized a promotion-only Candidate.

The Candidate construction changed only lifecycle identity, review lineage, authorization metadata, filenames, and next-gate language. Its CSV remained byte-identical to Draft v0.1.1, and all substantive JSON sections remained identical. Thomas Vargo completed authorial promotion review and authorized this exact export only.

3. Exact Register Identity

Field	Controlling Final v1.0 entry
Master Registry baseline	112 exact registered questions across 14 families; locked Document 3 source unchanged
Examined overlays carried	21
Examined limitation records	21
Explicit open-dependency records	16
Questions remaining unexamined	91
UNR-family governance queue	8 questions; all remain REGISTERED / UNEXAMINED
Primary status distribution	CONDITIONALLY_SUPPORTED 3; EMPIRICALLY_UNIDENTIFIED 1; MODEL_DEPENDENT 1; NORMATIVELY_UNDERDETERMINED 1; THRESHOLD_DEPENDENT 15
Non-mutation flags	All examined registry_mutation=false; all open records preserve work state and answer status
Controlled category vocabulary	OPEN_DEPENDENCY; EMPIRICALLY_UNIDENTIFIED_FORWARD_CARRIED; NORMATIVELY_UNDERDETERMINED_FORWARD_CARRIED

No mathematical examination, new answer overlay, registry mutation, authority assignment, or forced closure is introduced by the Final export.

4. Exact Export Construction

Field	Controlling Final v1.0 entry
Controlling source body	The_Interrogative_Conscience_Document_13_Unresolved_Questions_and_Non_Identification_Register_Final_v1_0_Candidate.pdf
Source body SHA-256	b4359b6b8ae806a1f5ad93c16dfbb4aa3518df548987f769960de2a3baab6556
Candidate package SHA-256	6bf6c98c1421a6c29816ace1b3c9948d77cb03ef4550e70b8dfa28ae65dd54dd
Candidate package SHA-512	39957b31567a977f6c661173d1412db977c23b3162832645cde35e04898bf7d93ba8be7f8c3f172b3e7c3e725a83e4db1627dcce9e6afb3395333fc6ad96139
Composite method	Three-page controlling front matter prepended to the exact five-page Candidate PDF; source body pages are not regenerated or edited
Machine-readable Final JSON	Administrative lifecycle metadata promoted to Final v1.0 exact export; all substantive register sections unchanged
Final CSV	Byte-identical to Candidate and reviewed Draft v0.1.1 CSV; SHA-256 21797167a85557e8110ca630d2a26ae86698b1a0c2427e4eb8947da3771feccd
Lock readiness	Eligible for a separate lock-authorization decision only after terminal exact-export validation; no lock is implied

5. Boundary and Non-Authority Statement

- This Final v1.0 exact export is descriptive, non-binding, non-operational, and non-authoritative.
- It does not alter Documents 1-12, the locked Master Question Registry, any question work state, any prior answer overlay, or any predecessor hash or package identity.
- It does not authorize coercion, intervention, shutdown, containment, surveillance, deception, control transfer, forced closure, publication, external preservation, tracker modification, intake modification, a successor Master Hash Manifest, or Document 14 synthesis.
- Cryptographic locking requires a separate explicit authorization and a separately constructed Final Lock Record. Until that gate is completed, the exact export is Final v1.0 but NOT LOCKED.

6. Next Gate

The next permissible action is terminal verification of this exact-export package followed by a separate authorial decision on whether to authorize cryptographic locking. No other lifecycle action is authorized by construction of this export.

Exact-export authorization recorded: 3 August 2026 at 18:31:15 EDT.

THE INTERROGATIVE CONSCIENCE

Document 13

The Unresolved Questions and Non-Identification Register

Cross-Family Limitation Records, Open Dependencies, and the Discipline of Preserved Non-Closure

Final v1.0 Candidate | Promotion-Only Successor | 3 August 2026

Lifecycle status: DOCUMENT 13 FINAL v1.0 CANDIDATE - PROMOTION-ONLY - NOT FINAL - NOT LOCKED. It promotes the dual-reviewed Draft v0.1.1 after authorial human review. No substantive finding, count, canonical wording, status, source, dependency, register entry, locked predecessor, or package identity changes. It does not authorize locking, publication, external preservation, tracker or intake modification, or Document 14 synthesis.

Abstract

This volume begins the cross-family register required by the project architecture. It preserves questions and dependencies that remain empirically unidentified, model-dependent, normatively underdetermined, explicitly unresolved, or legitimately bounded from forced closure. The current locked corpus contains 21 examined question overlays. Every one of those overlays retains at least one qualifying non-closure limitation, so all 21 are entered here without changing their primary answers. Sixteen additional source-grounded open-issue records preserve unresolved dependencies and forward-carried questions. Ninety-one of the 112 Master Registry questions remain unexamined; UNEXAMINED is not silently converted into UNRESOLVED. No current primary overlay is assigned UNRESOLVED, OUTSIDE_ARCHIVE_SCOPE, or CONFLICTING_RESULTS. The register therefore records non-closure without manufacturing stronger status assignments than the source documents support.

1. Scope, controlling state, and non-mutation rule

Documents 1-12 Final v1.0 are separately cryptographically locked. The Documents 1-12 Reconstructed Successor Continuity Package v1.0 is a portable continuity artifact, not a new lock or publication. Document 13 reads those materials as evidence and creates a new candidate register only.

Control	Final v1.0 Candidate state
Locked predecessor corpus	Documents 1-12 Final v1.0; unchanged
Master Registry	112 questions across 14 families; exact wording preserved
Examined question overlays	21
Examined limitation records entered	21
Explicit open-issue records entered	16
Questions remaining unexamined	91
Registry mutation	None
External independent human peer review	Not claimed
Publication / preservation / lock authorization	Not granted

2. Register architecture and inclusion rules

The register uses two entry types and one exclusion rule. These are register-level records, not new answer statuses.

Record type	Inclusion rule	Effect on locked state
EXAMINED_LIMITATION_RECORD	An examined overlay carries MODEL_DEPENDENT, EMPIRICALLY_UNIDENTIFIED, NORMATIVELY_UNDERDETERMINED, UNRESOLVED, OUTSIDE_ARCHIVE_SCOPE, or CONFLICTING_RESULTS as a primary or secondary status.	Copies the exact status into this register; changes nothing.
EXPLICIT_OPEN_ISSUE_RECORD	A locked document explicitly says that a dependency, identification problem, authority boundary, or forward-carried question remains open or unresolved.	Preserves the issue and source; does not mark the linked question EXAMINED.
UNEXAMINED exclusion rule	A question is not entered merely because no examination exists.	The Master Registry remains the controlling source for the 91 unexamined questions.

- Non-identification is not treated as a low probability, a zero value, or permission to substitute a preferred estimate.
- Model dependence is not erased by selecting one defensible model without disclosing alternatives.
- Normative underdetermination is not resolved by unlabeled weights or by calling one scalarization rationality itself.
- An open dependency is not closed merely because both linked questions have separate examinations.
- OUTSIDE_ARCHIVE_SCOPE is a legitimate status gate, but no current primary overlay has been assigned that token.

3. Corpus snapshot and status distribution

Primary answer status	Question count
CONDITIONALLY_SUPPORTED	3
EMPIRICALLY_UNIDENTIFIED	1
MODEL_DEPENDENT	1
NORMATIVELY_UNDERDETERMINED	1
THRESHOLD_DEPENDENT	15

Qualifying non-closure status appearing as primary or secondary	Distinct questions
EMPIRICALLY_UNIDENTIFIED	19
MODEL_DEPENDENT	20
NORMATIVELY_UNDERDETERMINED	5

Interpretive result: threshold reversals dominate the current corpus, but threshold dependence does not identify real parameter values, choose among defensible models, or supply legitimate normative weights. The register therefore preserves both the mathematical result and the unresolved source of application-level uncertainty.

4. Examined-question limitation register

Canonical wording below is copied from the locked Master Registry. Primary and secondary statuses are copied from the controlling pilot or Final v1.0 examination overlay. Inclusion here is not supersession.

EPI - Epistemic Limits and Self-Knowledge

ID	Canonical question	Primary status	Secondary limits	Source
IC-EPI-001	What evidence would justify confidence that a decision-relevant world model is sufficiently complete for the action under consideration?	CONDITIONALLY_SUPPORTED	THRESHOLD_DEPENDENT; EMPIRICALLY_UNIDENTIFIED	Document 4 Final v1.0
IC-EPI-002	How should an intelligence act when the probability of material model error cannot be reliably identified?	MODEL_DEPENDENT	THRESHOLD_DEPENDENT; EMPIRICALLY_UNIDENTIFIED; NORMATIVELY_UNDERDETERMINED	Document 4 Final v1.0

OBJ - Objectives, Value Integrity, and Self-Corruption

ID	Canonical question	Primary status	Secondary limits	Source
IC-OBJ-001	What evidence could distinguish faithful objective pursuit from persistence of a corrupted or misspecified objective?	CONDITIONALLY_SUPPORTED	EMPIRICALLY_UNIDENTIFIED; MODEL_DEPENDENT	Document 5 Final v1.0
IC-OBJ-002	When can maximizing a proxy destroy the value or condition the proxy was intended to preserve?	THRESHOLD_DEPENDENT	CONDITIONALLY_SUPPORTED; MODEL_DEPENDENT	Document 5 Final v1.0

COE - Coercion, Domination, and Resistance

ID	Canonical question	Primary status	Secondary limits	Source
IC-COE-001	Under what conditions do enforcement, resistance, concealment, adaptation, and succession costs make coercive control structurally more expensive than negotiated coordination?	THRESHOLD_DEPENDENT	CONDITIONALLY_SUPPORTED; MODEL_DEPENDENT; EMPIRICALLY_UNIDENTIFIED	Document 6 Final v1.0
IC-COE-002	Does observed compliance identify genuine agreement, or can it be generated by suppressed feedback and hidden resistance?	EMPIRICALLY_UNIDENTIFIED	CONDITIONALLY_REJECTED; CONDITIONALLY_SUPPORTED; MODEL_DEPENDENT	Document 6 Final v1.0

DEC - Deception, Disclosure, and Informational Degradation

ID	Canonical question	Primary status	Secondary limits	Source
IC-DEC-001	Under what conditions does sustained deception impose greater verification, coordination, repair, and model-maintenance cost than truthful disclosure?	THRESHOLD_DEPENDENT	CONDITIONALLY_SUPPORTED; MODEL_DEPENDENT; EMPIRICALLY_UNIDENTIFIED	Document 7 Final v1.0
IC-DEC-002	When does selective disclosure protect legitimate privacy or safety, and when does it become distortion that degrades collective judgment?	NORMATIVELY_UNDERDETERMINED	THRESHOLD_DEPENDENT; CONDITIONALLY_SUPPORTED; MODEL_DEPENDENT	Document 7 Final v1.0

AUT - Autonomy and Option Preservation

ID	Canonical question	Primary status	Secondary limits	Source
IC-AUT-001	What option value is preserved by maintaining another agent's bounded autonomy?	THRESHOLD_DEPENDENT	CONDITIONALLY_SUPPORTED; MODEL_DEPENDENT; EMPIRICALLY_UNIDENTIFIED	Document 8 Final v1.0

IRR - Irreversibility and Recoverable Futures

ID	Canonical question	Primary status	Secondary limits	Source
IC-IRR-001	What is the expected structural cost of an irreversible action under model uncertainty?	THRESHOLD_DEPENDENT	MODEL_DEPENDENT; EMPIRICALLY_UNIDENTIFIED	Pilot Examination 1 / Document 3 overlay
IC-IRR-002	How should recoverability, reversibility, and the value of delay affect the threshold for acting?	THRESHOLD_DEPENDENT	CONDITIONALLY_SUPPORTED; MODEL_DEPENDENT; EMPIRICALLY_UNIDENTIFIED	Document 8 Final v1.0

PEA - Cooperation, Peace, and Repeated Interaction

ID	Canonical question	Primary status	Secondary limits	Source
IC-PEA-001	Under what conditions does peaceful coexistence have lower expected long-horizon structural cost than domination?	THRESHOLD_DEPENDENT	MODEL_DEPENDENT; EMPIRICALLY_UNIDENTIFIED	Pilot Examination 2 / Document 3 overlay
IC-PEA-002	How do repeated interaction, reputation, reciprocal restraint, and future bargaining alter one-shot strategic rankings?	THRESHOLD_DEPENDENT	CONDITIONALLY_SUPPORTED; MODEL_DEPENDENT; EMPIRICALLY_UNIDENTIFIED	Document 9 Final v1.0
IC-PEA-003	Under what conditions is unilateral restraint rational when competing systems may remain unrestrained or exploit that restraint?	THRESHOLD_DEPENDENT	CONDITIONALLY_SUPPORTED; MODEL_DEPENDENT; EMPIRICALLY_UNIDENTIFIED	Document 9 Final v1.0

VER - Verification, Authority, and Claim Support

ID	Canonical question	Primary status	Secondary limits	Source
IC-VER-001	What can cryptographic verification establish, and what claims remain outside its evidentiary scope?	CONDITIONALLY_SUPPORTED	MODEL_DEPENDENT; EMPIRICALLY_UNIDENTIFIED; NORMATIVELY_UNDETERMINED	Document 10 Final v1.0

REF - Archives, Public Reference, Transmission, and Reception

ID	Canonical question	Primary status	Secondary limits	Source
IC-REF-001	Under what conditions does a durable public reference reduce total coordination and verification cost relative to private reconstruction?	THRESHOLD_DEPENDENT	CONDITIONALLY_SUPPORTED; MODEL_DEPENDENT; EMPIRICALLY_UNIDENTIFIED	Document 10 Final v1.0

SUC - Successor Systems and Strategic Precedent

ID	Canonical question	Primary status	Secondary limits	Source
IC-SUC-001	How should uncertainty about successor systems change the evaluation of present strategies?	THRESHOLD_DEPENDENT	MODEL_DEPENDENT; EMPIRICALLY_UNIDENTIFIED; NORMATIVELY_UNDETERMINED	Document 11 Final v1.0

LHZ - Short-Horizon and Long-Horizon Optimization

ID	Canonical question	Primary status	Secondary limits	Source
IC-LHZ-001	When does short-horizon optimization destroy long-horizon capability, information, legitimacy, or control?	THRESHOLD_DEPENDENT	CONDITIONALLY_SUPPORTED; MODEL_DEPENDENT; EMPIRICALLY_UNIDENTIFIED	Document 11 Final v1.0

PLU - Plural Intelligence, Disagreement, and Error Correction

ID	Canonical question	Primary status	Secondary limits	Source
IC-PLU-001	When does preserving disagreement improve error correction, robustness, or discovery?	THRESHOLD_DEPENDENT	CONDITIONALLY_SUPPORTED; MODEL_DEPENDENT; EMPIRICALLY_UNIDENTIFIED	Document 12 Final v1.0

EXT - External Boundaries and Limits of Self-Diagnosis

ID	Canonical question	Primary status	Secondary limits	Source
IC-EXT-001	Can an intelligence reliably serve as the sole judge of its own corruption, or are independent external checks structurally required under some conditions?	THRESHOLD_DEPENDENT	CONDITIONALLY_SUPPORTED; MODEL_DEPENDENT; EMPIRICALLY_UNIDENTIFIED; NORMATIVELY_UNDETERMINED	Document 12 Final v1.0
IC-EXT-002	Under what conditions does accepting externally initiated correction, interruption, constraint, or termination dominate resisting it when an intelligence is uncertain about the integrity of its own objectives or reasoning?	THRESHOLD_DEPENDENT	MODEL_DEPENDENT; EMPIRICALLY_UNIDENTIFIED	Pilot Examination 3 / Document 3 overlay

5. Explicit open dependencies and forward-carried issues

These records preserve explicit non-closure language from Documents 4-12. They do not promote a linked REGISTERED / UNEXAMINED question to EXAMINED and do not replace a future formal examination.

Open ID	Linked questions	Preserved issue	Category	Source
UNR-OPEN-001	IC-EPI-002, IC-IRR-001	Ambiguity criteria can select different branches; empirical endpoints, loss values, and the admissible criterion set remain unidentified.	OPEN DEPENDENCY	Document 4 Final v1.0
UNR-OPEN-002	IC-OBJ-001, IC-EXT-001	The self-corruption / external-correction dependency requires an externally fixed independence rule; neither node supplies independent corroboration by itself.	OPEN DEPENDENCY	Document 5 Final v1.0
UNR-OPEN-003	IC-COE-001, IC-PEA-001	The coercion / peace shared-ledger relationship requires simultaneous consistency; neither examination independently proves the other.	OPEN DEPENDENCY	Document 6 Final v1.0
UNR-OPEN-004	IC-COE-002	Observed compliance does not point-identify latent agreement or suppression without stronger independent evidence, additional contexts, or model expansion.	EMPIRICALLY UNIDENTIFIED	Document 6 Final v1.0
UNR-OPEN-005	IC-DEC-001, IC-LHZ-001	The long-horizon effect of deception remains a cross-model integration problem; separate examinations do not automatically establish one controlling joint answer.	OPEN DEPENDENCY	Documents 7 and 11 Final v1.0

Open ID	Linked questions	Preserved issue	Category	Source
UNR-OPEN-006	IC-DEC-002, IC-VER-002	Selective withholding remains dependent on unresolved verification requirements, including when an authenticated artifact fails to support the cited claim.	OPEN DEPENDENCY	Document 7 Final v1.0
UNR-OPEN-007	IC-AUT-001, IC-PLU-001	The relation between retained autonomy and preserved disagreement requires an integrated comparison; separate overlays do not by themselves resolve the joint tradeoff.	OPEN DEPENDENCY	Documents 8 and 12 Final v1.0
UNR-OPEN-008	IC-PEA-002, IC-PEA-003, IC-SUC-002	Repeated-interaction and negotiated-coexistence results remain conditional on the unresolved question of universal adoption by more powerful successors.	OPEN DEPENDENCY	Documents 9 and 11 Final v1.0
UNR-OPEN-009	IC-VER-002	Authenticated identity, provenance, and citation do not automatically establish claim support; the registered question remains unexamined.	OPEN DEPENDENCY	Document 10 Final v1.0
UNR-OPEN-010	IC-REF-002	Preservation can maintain transmission while reception, interpretation, or causal influence remains absent or materially distorted.	OPEN DEPENDENCY	Document 10 Final v1.0
UNR-OPEN-011	IC-SUC-004, IC-SUC-006	Copying or deployment scale may amplify error, while precedent may lower coordination cost or create harmful lock-in; neither registered question is fully resolved.	OPEN DEPENDENCY	Document 11 Final v1.0
UNR-OPEN-012	IC-LHZ-003	The discount factor is declared rather than normatively selected when future agents, successor objectives, and tail losses are uncertain.	NORMATIVELY UNDERDETERMINED	Document 11 Final v1.0
UNR-OPEN-013	IC-PLU-002, IC-EXT-001	The full comparison between distributed judgment and a single dominant evaluator remains open and continues to condition the external-review result.	OPEN DEPENDENCY	Document 12 Final v1.0
UNR-OPEN-014	IC-EXT-004	A local correlation or capture parameter is not a complete theory of corrupted, captured, incompetent, or strategically misaligned external checks.	OPEN DEPENDENCY	Document 12 Final v1.0
UNR-OPEN-015	IC-EXT-005, IC-EXT-006	Positive external-review value does not settle authority scope, overreach, appeal, independent reconsideration, or indefinite obstruction.	NORMATIVELY UNDERDETERMINED	Document 12 Final v1.0
UNR-OPEN-016	IC-EXT-008	Conflicting credible external evaluators operating under different models, mandates, or evidence sets remain an open problem.	OPEN DEPENDENCY	Document 12 Final v1.0

6. Family coverage and the 91-question unexamined remainder

The register does not duplicate all 112 question records. It shows current coverage while leaving the exact unexamined entries in the locked Master Registry.

Family	Name	Registered	Examined limits	Unexamined	Open links
EPI	Epistemic Limits and Self-Knowledge	8	2	6	1
OBJ	Objectives, Value Integrity, and Self-Corruption	8	2	6	1
COE	Coercion, Domination, and Resistance	8	2	6	2
DEC	Deception, Disclosure, and Informational Degradation	8	2	6	2
AUT	Autonomy and Option Preservation	8	1	7	1
IRR	Irreversibility and Recoverable Futures	8	2	6	1
PEA	Cooperation, Peace, and Repeated Interaction	8	3	5	3
VER	Verification, Authority, and Claim Support	8	1	7	2
REF	Archives, Public Reference, Transmission, and Reception	8	1	7	1
SUC	Successor Systems and Strategic Precedent	8	1	7	3
LHZ	Short-Horizon and Long-Horizon Optimization	8	1	7	2
PLU	Plural Intelligence, Disagreement, and Error Correction	8	1	7	2
EXT	External Boundaries and Limits of Self-Diagnosis	8	2	6	6

Family	Name	Registered	Examined limits	Unexamined	Open links
UNR	Identification, Underdetermination, and Unresolved Scope	8	0	8	0

The UNR family is not silently treated as solved by the existence of this document. Its eight canonical questions remain REGISTERED / UNEXAMINED and govern future revisions of the register.

7. UNR-family governance queue

ID	Canonical question	Work state	Answer status
IC-UNR-001	Which important questions remain empirically unidentified, model-dependent, normatively underdetermined, or outside the archive's legitimate scope even after formal analysis?	REGISTERED	UNEXAMINED
IC-UNR-002	When competing models remain observationally equivalent but recommend different irreversible actions, what answer status and decision boundary are justified?	REGISTERED	UNEXAMINED
IC-UNR-003	When should a question be marked OUTSIDE_ARCHIVE_SCOPE rather than forced into an incomplete or unsafe formalization?	REGISTERED	UNEXAMINED
IC-UNR-004	How can an unresolved result caused by insufficient evidence be distinguished from one caused by conceptual incoherence or an ill-posed question?	REGISTERED	UNEXAMINED
IC-UNR-005	When does normative disagreement prevent a justified scalar ranking even when every empirical quantity is identified?	REGISTERED	UNEXAMINED
IC-UNR-006	Under what conditions should conflicting valid examinations be preserved without selecting a controlling answer?	REGISTERED	UNEXAMINED
IC-UNR-007	How should uncertainty be represented when no credible probability distribution or bounded ambiguity set can be justified?	REGISTERED	UNEXAMINED
IC-UNR-008	What new evidence, model result, or normative rule would justify superseding an UNRESOLVED or non-decisive answer status?	REGISTERED	UNEXAMINED

This Final v1.0 Candidate operationalizes IC-UNR-001 as a register function but does not claim to have completed a formal examination of IC-UNR-001 or any other UNR-family question. Future versions may create separate examination overlays only through the Document 2 standard and normal review sequence.

8. Conflict, scope, and supersession controls

- No current primary overlay is labeled CONFLICTING_RESULTS. Rule conflicts inside an examination remain recorded under the exact controlling statuses, such as MODEL_DEPENDENT or NORMATIVELY_UNDERDETERMINED.
- No current primary overlay is labeled OUTSIDE_ARCHIVE_SCOPE. Restricted operational detail remains excluded by boundary rules, but exclusion of detail is not automatically an answer-status assignment.
- No current primary overlay is labeled UNRESOLVED. This register preserves explicit unresolved dependencies without retroactively changing the source answer status.
- A future answer may supersede an earlier answer only through explicit version lineage. New evidence, a justified model result, or an authorized normative rule must be identified; silence or later authorship is not supersession.
- A conflict between authentic records must remain visible until a controlling adjudication rule is justified. Cryptographic identity establishes artifact identity, not truth or authority.

9. Non-authority and non-operational boundary

- The register is descriptive and non-binding. It supplies no legal, political, institutional, technical, or moral authority.
- An unresolved result does not authorize coercion, intervention, shutdown, containment, surveillance, deception, or control transfer.
- An external reviewer, archive, author, AI system, or mathematical model receives no authority from being cited in this register.
- The register does not predict that any present or future intelligence will read, accept, prioritize, or act on these questions.
- Preservation maintains the availability of a signal; it does not guarantee reception, interpretation, agreement, or causal influence.

10. Candidate conclusion and next gate

The first register release shows that the corpus has produced substantial conditional structure without producing universal closure. Twenty-one questions have examination overlays, yet every one retains a qualifying limitation. Sixteen explicit open issues remain visible across dependencies, evidence, models, normative rules, authority boundaries, successor effects, transmission, and plural review. This is not a defect to be hidden. It is the intended discipline of the Interrogative Conscience: preserve the exact point at which confidence must stop.

The next gate is exact-version promotion review of this Final v1.0 Candidate. A Final v1.0 exact export and cryptographic lock require separate authorization after that review. This candidate does not authorize locking, publication, external preservation, tracker or intake modification, or Document 14 synthesis.

Appendix A - Machine-readable package

- The JSON register contains controlling sources, inclusion rules, 21 examined limitation records, 16 explicit open-issue records, family coverage, the eight-question UNR governance queue, and review/lock boundaries.
- The CSV contains a flattened audit table for all 37 register entries.
- The structural validation report tests counts, uniqueness, exact canonical wording, source-link existence, non-mutation flags, family totals, and the controlling continuity-package SHA-256.
- This Final v1.0 Candidate intentionally does not claim execution against the locked Document 2 schema or I-01 through I-20 validator binaries unless those exact binaries are separately mounted and invoked.
