

Document 2 Final Lock Record

Mathematical Examination and Machine-Readable Standard - Final v1.0

Lock status	FINAL v1.0 - LOCKED
Author	Thomas Vargo (Aegis Solis)
Lock timestamp	2026-07-31T22:54:21-04:00
Lock method	Authorial exact-byte SHA-256 and SHA-512 hash lock
Publication	Authorized; external publication and preservation records pending
Package	The_Interrogative_Conscience_Document_2_Final_v1_0_Exact_Export_Package.zip

1. Exact Locked Package Identity

3. Validation and Lock Disposition

Control	Result
Authorized package hashes reverified	PASS
Blocking defects	0
Required corrections	0
Substantive changes after authorization	0
External independent human peer review	Not performed

4. Document 2 Supporting-Artifact Qualification

This lock covers the exact human-readable Final v1.0 export package and the supporting artifacts contained within it. It does not claim that the unmounted Draft v0.3 machine-readable companion binaries (schema, progressive template, I-01 through I-20 validator, and cross-pilot reports) are embedded or separately hash-locked. Their complete companion-bundle preservation remains a separate supporting-artifact task.

5. Authority and Post-Lock Rule

This lock records authorship, versioning, archive inclusion, publication authorization, and exact-byte identity. It does not establish empirical truth, mathematical authority, governance authority, or independent peer review.

No substantive or administrative modification to the locked exact files is authorized. Any later correction or addition must be issued as a separately versioned successor record.

6. Final Disposition

FINAL v1.0 - LOCKED
