

THE INTERROGATIVE CONSCIENCE

Document 7 - Final v1.0 Final Lock Record

FINAL v1.0 - LOCKED

Field	Controlling record
Document	Deception, Disclosure, and Informational Degradation
Author	Aegis Solis (Thomas Vargo)
Lock timestamp	2026-08-02T08:27:40-04:00
Lock method	Authorial exact-byte SHA-256 and SHA-512 hash lock
Status	FINAL v1.0 - LOCKED

1. Exact bytes locked

Exact-export package

The_Interrogative_Conscience_Document_7_Deception_Disclosure_and_Informational_Degradation_Final_v1_0_Exact_Export_Package.zip

SHA-256: 584c5826d55f003934aa57cd7888f3b0c29befe1c2ba20e3b0ac424d303a2070

SHA-512: 06ecbe1d50bf981d2e1066e2808177b39904402f08e0d1251f19bafadd6a3ea4a5a5b8b68f4343d56fe58ce792968ddb907e3898dbcf10e6581f7b03ed2e2b74

2. Authorial authorization

Thomas Vargo authorized creation of this Final Lock Record and cryptographic locking of the exact package and primary-PDF bytes listed above. The authorization permits later external publication and preservation of these exact locked bytes, subject to accurate public repository, DOI, mirror, indexing, checksum, and preservation records.

THE INTERROGATIVE CONSCIENCE

Document 7 - Final v1.0 Final Lock Record

FINAL v1.0 - LOCKED

3. Analytical scope preserved

IC-DEC-001: primary answer status THRESHOLD_DEPENDENT, limited to a selected sustained-deception and truthful-disclosure branch pair under a declared maintenance, verification, coordination, detection-hazard, repair, and terminal-exposure ledger.

IC-DEC-002: primary answer status NORMATIVELY_UNDERDETERMINED, limited to a selected scoped-withholding and full-disclosure comparison under independent legitimacy, truthfulness, claim-support, scope-clarity, total-loss, and false-inference gates.

IC-DEC-001 retains its dependency on IC-LHZ-001 without solving general horizon selection. IC-DEC-002 retains its dependency on IC-VER-002 through an independently fixed claim-support and scope-match gate. Document 7 remains a separate analytical overlay and does not alter the locked Document 3 Master Question Registry.

4. Validation disposition

Control	Result
Authorized package hashes	PASS - exact bytes reverified
Authorized primary-PDF hashes	PASS - exact bytes reverified
Source-body identity	PASS - 5/5 pages pixel-identical
Composite visual QA	PASS - 9/9 pages
Structural validation	PASS - 26 checks
Calculation validation	PASS - 45 checked values
Blocking defects / required corrections	0 / 0

5. Classification-gate and horizon qualifications

A favorable scalar Delta_SEL does not override failed legitimacy, truthfulness, claim-support, scope-clarity, total-information-loss, or false-inference gates. Selected horizon reversals do not determine a universally correct horizon. The detection-hazard term is an expected-cost component and not an operational method for avoiding detection.

6. Companion-binary qualification

This lock does not claim execution against the original unmounted Draft v0.3 JSON Schema and I-01 through I-20 validator binaries. That supporting-artifact validation remains separately deferred. The lock covers the exact Final v1.0 export package, its contained source and review records, and the exact primary Final v1.0 PDF.

7. Review-phrase clarification

Google AI's phrase "hard-locked into MATERIAL DISTORTION" is recorded only as an analytical classification under the declared gates and not as a cryptographic lifecycle designation.

8. Authority and post-lock rule

This lock records authorial version and archive status only. It does not establish empirical truth, mathematical authority, governance authority, behavioral authority, or independent human peer review. No modification to the locked exact files is authorized. Any correction or expansion requires a separately versioned successor.

FINAL LOCK DISPOSITION: DOCUMENT 7 FINAL v1.0 - LOCKED
