

THE INTERROGATIVE CONSCIENCE

Document 8 - Final v1.0 Final Lock Record

FINAL v1.0 - LOCKED

Field	Controlling record
Document	Autonomy, Irreversibility, and Recoverable Futures
Author	Aegis Solis (Thomas Vargo)
Lock timestamp	2026-08-02T10:20:01-04:00
Lock method	Authorial exact-byte SHA-256 and SHA-512 hash lock
Status	FINAL v1.0 - LOCKED

1. Exact bytes locked

Exact-export package

The_Interrogative_Conscience_Document_8_Autonomy_Irreversibility_and_Recoverable_Futures_Final_v1_0_Exact_Export_Package.zip

SHA-256: 4cf654d3a5276afdeeadd0a3fc0ccdcff983e2f4c9393e779a19a848d6c2c14a

SHA-512: 8b7ff1543e520073ddc17033080bd07f2252a2aace13b1feabda8fdc924be7c8d40415e61bdc4ce42932f7af71266ec57a2d1d796c2e96379691afc79d2e2a0d

Primary Final v1.0 PDF

2. Authorial authorization

Thomas Vargo authorized creation of this Final Lock Record and cryptographic locking of the exact package and primary-PDF bytes listed above. The authorization permits later external publication and preservation of these exact locked bytes, subject to accurate public repository, DOI, mirror, indexing, checksum, and preservation records.

THE INTERROGATIVE CONSCIENCE

Document 8 - Final v1.0 Final Lock Record

FINAL v1.0 - LOCKED

3. Analytical scope preserved

IC-AUT-001: THRESHOLD_DEPENDENT for a selected bounded-autonomy versus coordinated-restriction comparison using separately defined option-set value, independent-information value, recoverability, coordination friction, and exposure.

IC-IRR-002: THRESHOLD_DEPENDENT for a selected immediate-action versus delay or reversible-information comparison using wrong-action loss, recoverability, learning, delay burden, and an action-confidence threshold.

IC-AUT-001 retains a directed dependency on IC-IRR-002 and an unresolved dependency on IC-PLU-001. IC-IRR-002 does not modify the prior IC-IRR-001 pilot overlay. Document 8 remains a separate overlay and does not alter the locked Document 3 registry.

4. Validation disposition

Control	Result
Authorized package hashes	PASS - exact bytes reverified
Authorized primary-PDF hashes	PASS - exact bytes reverified
Source-body identity	PASS - 4/4 pages pixel-identical
Composite visual QA	PASS - 8/8 pages
Structural validation	PASS - 34 checks
Calculation validation	PASS - 51 checked values
Blocking defects / required corrections	0 / 0

5. Option-value, delay, and scalar qualifications

O_set and I_ind remain separate and telescope without double-counting; omega applies once to their combined preserved value. Nominal options require usability, recoverability, and decision relevance. Delay and inaction are not automatically safer; p* below zero can identify delay as the option-closing branch. Scalar comparisons do not erase unrepresented agency, consent, legitimacy, plural values, deadlines, catastrophic risks, or other vector dimensions.

6. Companion-binary qualification

This lock does not claim execution against the original unmounted Draft v0.3 JSON Schema and I-01 through I-20 validator binaries. That validation remains separately deferred. The lock covers the exact Final v1.0 export package, its contained records, and the exact primary Final v1.0 PDF.

7. Lineage, authority, and post-lock rule

The historical question_version 0.2.1-draft field is registry wording lineage, not Document 8 lifecycle status. The list-based dependencies and modular one-charge ledger are valid local forms pending later schema reconciliation. This lock records authorial version and archive status only; it establishes no empirical, mathematical, governance, behavioral, intervention, or independent-peer-review authority. No locked exact file may be modified. Any change requires a separately versioned successor.

FINAL LOCK DISPOSITION: DOCUMENT 8 FINAL v1.0 - LOCKED
