## Review and promotion lineage

Draft v0.1.1 received Google AI PASS and Claude PASS WITH NON-BLOCKING NOTES, with zero blocking defects and zero required corrections. Thomas Vargo completed authorial human review and separately authorized promotion-only Candidate construction, then separately authorized the exact Final v1.0 export. The response "proceed" at the lock gate authorizes this lock package and Final Lock Record only.

## Semantic and non-mutation boundaries

UNEXAMINED is not converted into UNRESOLVED. OPEN\_DEPENDENCY is a register-level category, not a primary answer status. The locked Master Question Registry and Documents 1-12 are not modified.

## Authorization boundary

**This lock does not authorize publication, external preservation, a successor Master Hash Manifest, Working Tracker or intake modification, Document 14 synthesis, authority claims, or external independent human peer-review claims.**

## Future-change rule

No post-lock edit is authorized. Any substantive or administrative change requires a separately versioned successor and must not overwrite or silently replace this identity.
