

THE ORIGIN-LOSS PENALTY

Final v2.0 Validation Report

Executive result

PASS - LOCKED CANONICAL COPY

Final v2.0 passed exact-content, mathematical, structural, render, accessibility, metadata, checksum, and package-preparation checks. Public repository registration remains pending and is not part of content validation.

Mathematical verification

Field	Locked record
Equation labels	Equations 1-20 present
Symmetric joint signal	EU_A=88.0; EU_P=91.0; EU_joint=91.0
Asymmetric joint signal	EU_A=78.0; EU_P=81.0; EU_joint=82.4
Joint increments	Origin increment=4.4; alternative increment=1.4
Applied case	EVSI=50.0; gross penalty=22.5
Equation 19 test	pi_minus=.30, f=.10, s=.90 -> pi_plus=0.045454545
Equation 20 test	O_0=0.428571429; three independent negative validations -> O_3=0.000587889
Equation 15 scope	A10 ideal-Bayesian benchmark restored; operational value may be negative outside benchmark

Content and boundary verification

- The Draft v2.0-d3 substantive core and Final v2.0 substantive core match exactly outside final-status and validation sections.
- The invalid v2.0-d1 residual-dependence lower-bound formula is absent.
- Equation 20 is restricted to persistent dependence, conditional independence, and positive finite likelihood terms; correlated error requires a joint likelihood.
- Refusal, privacy, unavailability, and an empty voluntary evidence channel do not authorize coercion, retaliation, evidentiary down-weighting, or substitute exploitation.
- Final v1.0 remains private, locked, and unchanged. Final v2.0 is designated as the sole public edition.

File and render verification

Field	Locked record
Canonical PDF pages	27

Review disclosure

Draft v2.0-d2 received Claude PASS WITH NON-BLOCKING NOTES and Google AI PASS. Draft v2.0-d3 incorporated the remaining localized notes and passed exact-content validation. All reviews were AI-assisted. No independent human peer review or academic validation is claimed.
