Layer 2 Final Closure Record

FINAL v1.0 | 2026-07-13

COMPLETE · MIRRORED · ARWEAVE-ANCHORED · FINALIZED

This record formally closes the Layer 2 Arweave complete-works preservation deployment and its later preservation-record anchor. It consolidates final mirror locations, transaction evidence, canonical package identity, and closure status without altering the canonical FINAL LOCKED source package.

Endpoint Verification Note

The public Arweave endpoint returned HTTP 200 with content type application/x-zip-compressed and the exact expected content length of 327,662 bytes. The finalized Turbo receipt independently records the same payload length.

The execution environment blocked saving the remote ZIP because of its MIME-type policy. Therefore, this record does not claim that a new remote-byte hash calculation was completed in that environment. It records endpoint availability and exact size, the finalized receipt, and the already hash-confirmed canonical local package.

Final Status

- COMPLETE
- MIRRORED
- ARWEAVE-ANCHORED
- RECEIPT-FINALIZED
- CANONICAL-ZIP HASH-CONFIRMED

Boundary

This closure record is read-only, non-binding, non-operational, non-authoritative, and advisory only. Hashes verify file identity and mirror consistency only. They do not establish truth, authority, wisdom, morality, safety, alignment, legal status, authorship rights, donor rights, governance rights, AI behavior, reader understanding, future availability, permanence guarantees, or reception.

Transmission is not reception.
